“What Makes Our Test Equipment Superior”

Flexible Fuel Cell Test Stand

The Lab-Pro “Flexible Test System” by PDS will be pre-configured for future instrumentation, allowing the operator to easily assign a name and incorporate it into the test plan. The planned modularity allows the PDS Test Stand to easily be re-configured to perform various tests that typically require a totally new piece of test equipment. This means an operator can easily add new modules as the need arises. As new technology develops, a module can be replaced. If additional testing requirements arise, new equipment can easily be added. For more information on PDS and our advanced fuel cell testing systems.
